Testing Types Used

Domains:

Web · Mobile · SaaS · AI Platform · E-commerce · Logistics · LMS · Social

Tools:

Jira · Postman · Chrome DevTools · Android Testing · TestFlight · GA4 · GTM · ClickUp

Testing Expertise

Types of testing applied across all projects

Functional Testing

End-to-end user flows, business logic, data consistency across modules

Exploratory Testing

Creative, unscripted discovery of edge cases and unexpected behaviour

Regression Testing

Verifying applied fixes do not break existing stable functionality

Mobile Testing

Android & iOS — physical devices, TestFlight and simulators

Cross-Browser Testing

Chrome, Firefox, Safari and Edge compatibility and layout consistency

API Testing

Postman-based request validation, response checks and backend integration

Bug Reports

12+

Domains

AI Writing Platform

Web · SaaS

Tested drafting, document editing, AI-assisted writing and collaboration flows. Found workspace navigation issues, saved content inconsistencies and AI output bugs.

E-commerce AI Platform

Web · SaaS

Validated AI Chat, AI Search and Admin Panel. Identified search accuracy issues, frontend-backend data mismatches and form validation bugs.

Interactive Digital Content Platform

Web · Children

Tested story browsing, interactive games and purchase flows. Found checkout blocker, gameplay freeze bugs and content display inconsistencies.

Legal Document Platform

Web · SaaS

Verified contract creation, document management and form validation. Detected data inconsistencies, navigation issues and regression bugs after updates.

Service Marketplace Platform

Web · B2C

Tested service browsing, booking flows and provider data. Found data inconsistencies, validation gaps and UI/UX issues across modules.

Sports Activity Mobile App

Mobile · iOS/Android

Validated purchase, checkout and transaction confirmation flows. Found screen transition issues, payment status bugs and form validation errors.

Student-Focused Mobile App

Mobile · Android

Tested student-facing flows, navigation and privacy settings. Identified critical privacy setting bypass, media upload failure and UI inconsistencies.

Typing Practice Platform

Web

Verified typing flows, score calculation, timer behaviour and progress tracking. Found result inconsistencies, input bugs and responsive layout issues.

Wellness & Mindfulness Mobile App

Mobile · iOS/Android

Tested lifestyle features, content display and navigation flows. Found screen transition bugs, content display issues and form validation gaps.

More Projects

Additional platforms tested through confidential and freelance engagements

AI Recruiting System

Web · SaaS

Tested AI-driven candidate search & ranking. Found ranking inconsistencies and data mismatches. Search relevance improved 30%.

AI Multi-Modal Platform

Web · SaaS

Validated AI chat, audio, image and video generation flows. Detected prompt handling issues and integration gaps between AI models.

Advertising Platform

Web · Marketing

Tested interactive banners, CTA buttons and voucher download flows. Found rendering inconsistencies and file handling bugs.

E-commerce Web Platform

Web · B2C

End-to-end testing of product listing, cart and checkout. Tested multilingual modules. UI/UX improved 25%, purchase issues reduced 30%.

Logistics Platform

Web · SaaS

Tested route selection, booking and multilingual flows. Found localisation inconsistencies and map integration gaps. Language bugs reduced 35%.

Meditation & Mindfulness LMS

Web · E-learning

Tested course flows and payment integrations (Stripe, PayPal, Klarna). Verified GDPR compliance and GA4/GTM tracking accuracy.

Real Estate Platform

Web · B2C

Tested property listings, inquiry forms and dynamic content. Found multiple UI inconsistencies and tracking gaps. UI stability increased 30%.

Social Mobile App

Mobile · Android

Validated chat, notifications and media upload flows. Found real-time messaging issues and API response inconsistencies.

Job Portal Platform

Web

Designed test cases for registration, job posting and application flows. API validation via Postman. Core workflow stability improved 30%.

Kitchenware E-commerce

Web · B2C

Tested product pages, real-time availability and shopping flows. Verified analytics tracking and cookie consent behaviour.

Invitation Card Builder

Web

Tested invitation creation, template rendering and email delivery. Found layout inconsistencies and image upload bugs.

IT Agency Website

Web · Corporate

End-to-end testing of multilingual pages and CTAs. Identified 15+ UI/UX issues in animations and interactive elements.

Sample Bug Report

BUG-001 **BLOCKER**

"Buy" Button Does Not Respond on Data Entry Page

Project	Module	Environment	Date
Digital Content Platform	Checkout / Purchase Flow	Chrome — Desktop	April 2026

Steps to Reproduce

1. Navigate to the story purchase page
2. Fill in all required data fields
3. Click the "Buy" button

Expected Result

The purchase flow proceeds to the payment / confirmation screen after clicking "Buy"

Actual Result

The "Buy" button does not respond. No action, no error message shown. Transaction cannot be completed.

Impact

Critical blocker — users cannot complete any purchase. Direct revenue loss and broken core user flow.

Sample Bug Report

BUG-002 CRITICAL

"Allow Message" Privacy Setting Ignored — Messages Still Received

Project	Module	Environment	Priority
Student Mobile App	Privacy Settings / Messaging	Android — Physical Device	Critical

Steps to Reproduce

1. Open Privacy Settings
2. Toggle OFF "Allow Message"
3. Save the setting
4. Ask another user to send a message

Expected Result

When "Allow Message" is OFF, no messages should be received from other users

Actual Result

Messages are still received despite the privacy setting being disabled. The privacy control has no effect.

Impact

Security & privacy violation. Users cannot control incoming messages. Breaks user trust and platform compliance.

Sample Bug Report

BUG-003 HIGH

Image Generation Returns Incorrect Output on Second Consecutive Prompt

Project	Module	Environment	Priority
AI Multi-Modal Platform	Image Generation	Chrome — Web App	High

Steps to Reproduce

1. Open the Image Generation module
2. Enter a prompt and generate an image
3. Without refreshing, enter a different second prompt
4. Click Generate again

Expected Result

A new image is generated based on the second prompt, fully independent of the first generation

Actual Result

The system returns the same image from the first prompt, or generates a mixed result combining both prompts incorrectly.

Impact

AI feature is unreliable. Users cannot trust output. Repeated prompts produce inconsistent results. Core feature broken.

Key Impact & Results

+30%

Search relevance & ranking consistency (AI Recruiting System)

-35%

Language-related defects reduced (Logistics Platform)

+25%

UI/UX consistency improved across multiple projects

90%

Regression coverage rate on critical flows

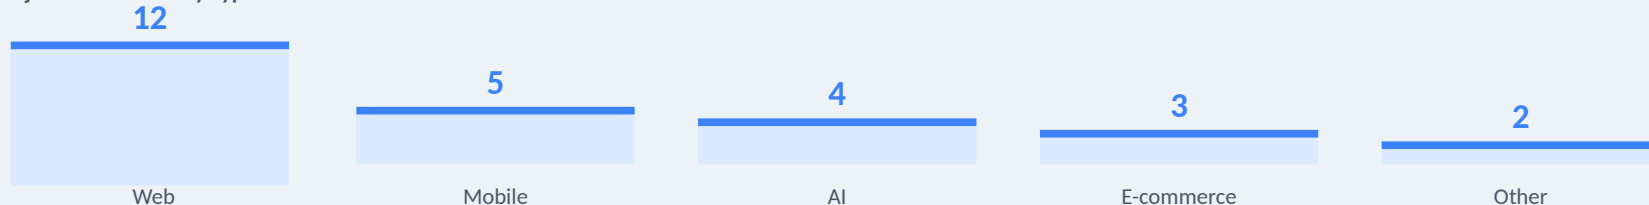

100%

Responsive layout stability across browsers & devices

+30%

AI response consistency & workflow reliability improved

Project Distribution by Type:

Tools & Work Approach

TOOLS & TECHNOLOGIES

Test Management

Jira · ClickUp · Google Sheets

API & Dev Tools

Postman · Chrome DevTools

Mobile Testing

Android Devices · TestFlight · iOS Simulator

Analytics & SEO

GA4 · GTM · WordPress SEO

Cross-Browser

Chrome · Firefox · Safari · Edge

Bug Reporting

Jira Tickets · Structured Templates · Test Reports

WORK APPROACH

01

Understand requirements & define test scope

02

Design test cases and exploratory checklists

03

Execute tests, document bugs with clear steps

04

Retest fixes & run regression cycles
