

Lili Imerlishvili

Manual QA Engineer

GetBot.AI · GenofIT · Pik.ge · Oct 2024 – Present

27+

Real-World Projects

2,500+

Test Cases Written

800+

Bug Reports Filed

8+

Testing Types Used

Domains:

Web · Mobile · SaaS · AI Platform · E-commerce · Logistics · LMS · Social

Tools:

Jira · Postman · Chrome DevTools · Android Testing · TestFlight · GA4 · GTM · ClickUp

⚡ Playwright + Cucumber BDD · TypeScript · GitHub Actions CI/CD

Testing Expertise

Types of testing applied across all projects

Functional Testing

End-to-end user flows, business logic, data consistency across modules

Exploratory Testing

Creative, unscripted discovery of edge cases and unexpected behaviour

Regression Testing

Verifying applied fixes do not break existing stable functionality

Mobile Testing

Android & iOS — physical devices, TestFlight and simulators

Cross-Browser Testing

Chrome, Firefox, Safari and Edge compatibility and layout consistency

API Testing

Postman-based request validation, response checks and backend integration

Project Portfolio

27 real-world client projects across web, mobile, AI and enterprise platforms

27+

Projects

2,500+

Test Cases

800+

Bug Reports

12+

Domains

AI Writing Platform

[Web · SaaS](#)

AI-assisted writing, collaboration flows, content inconsistencies & AI output bugs.

E-commerce AI Platform

[Web · SaaS](#)

AI Chat, AI Search and Admin Panel. Search accuracy, data mismatches, form bugs.

Digital Content Platform

[Web · Children](#)

Story browsing, games and purchase flows. Checkout blocker, gameplay freeze bugs.

Legal Document Platform

[Web · SaaS](#)

Contract creation, document management. Data inconsistencies, regression bugs.

Service Marketplace

[Web · B2C](#)

Booking flows and provider data. Data inconsistencies, validation and UI/UX gaps.

Sports Activity Mobile App

[Mobile · iOS/Android](#)

Purchase, checkout, transaction flows. Screen transition and payment status bugs.

Student Mobile App

[Mobile · Android](#)

Privacy settings, navigation, media upload. Critical privacy setting bypass found.

Typing Practice Platform

[Web](#)

Score calculation, timer behaviour, progress tracking. Input and layout bugs.

Wellness & Mindfulness App

[Mobile · iOS/Android](#)

Lifestyle features, navigation, content display. Screen and form validation gaps.

All projects anonymized. Real credentials, client names and proprietary data excluded.

Complete Project Portfolio — All 27

Real-world QA testing across AI platforms, web products, mobile apps and enterprise systems

AI & INTELLIGENT PLATFORMS

1. AI-Based Recruiting System
2. AI-Powered E-commerce Platform
3. AI-Powered Multi-Modal Platform
4. AI-Powered Writing Workspace Platform

BUSINESS & ENTERPRISE

5. Logistics & Transportation Platform
6. Meditation & Mindfulness LMS Platform
7. Quality Engineering Command Center
8. Real Estate and Construction Platform
9. Service Marketplace Platform

WEB & DIGITAL PLATFORMS

10. E-commerce Web Platform
11. Freelance Marketplace Platform
12. Heritage Hair Styling Brand Website
13. Interactive Advertising & Voucher Platform
14. Interactive Digital Content Platform
15. Invitation Card Builder Platform
16. IT Agency Website
17. Job Portal Platform
18. Kitchenware & Home Organization Platform
19. Legal Document Platform
20. Vacancy Review & Community Feedback Platform

MOBILE APPLICATIONS

21. Mobile Application – Social Platform
22. Mobile Social Discovery Platform
23. Sports Activity Mobile Application
24. Student-Focused Android Mobile Application
25. Travel Reservation Mobile Application
26. Typing Practice Mobile Application
27. Wellness & Mindfulness Mobile Application

Sample Bug Report

BUG-001

BLOCKER

"Buy" Button Does Not Respond on Data Entry Page

Project

Digital Content Platform

Module

Checkout / Purchase Flow

Environment

Chrome — Desktop

Date

April 2026

Steps to Reproduce

1. Navigate to the story purchase page
2. Fill in all required data fields
3. Click the "Buy" button

Expected Result

The purchase flow proceeds to the payment / confirmation screen after clicking "Buy"

Actual Result

The "Buy" button does not respond. No action, no error message shown. Transaction cannot be completed.

Impact

Critical blocker — users cannot complete any purchase. Direct revenue loss and broken core user flow.

Sample Bug Report

Student-Focused Mobile App

BUG-002

HIGH

"Allow Message" Privacy Setting Ignored — Messages Still Received

Project

Student Mobile App

Module

Privacy Settings / Messaging

Environment

Android — Physical Device

Priority

Critical

Steps to Reproduce

1. Go to Privacy Settings
2. Toggle "Allow Message" to OFF
3. Ask another user to send a message

Expected Result

When "Allow Message" is OFF, no messages should be received from other users.

Actual Result

Messages are still received despite the privacy setting being disabled. The privacy control has no effect.

Impact

Security & privacy violation. Users cannot control incoming messages. Broke user trust and platform consistency.

UI Automation — Playwright + Cucumber BDD

TypeScript · Page Object Model · GitHub Actions CI/CD

Framework Architecture

Language	TypeScript
Runner	Playwright (Chromium)
BDD Layer	Cucumber + Gherkin
Pattern	Page Object Model (POM)
CI/CD	GitHub Actions
Test Types	Smoke · E2E · Auth
Project	AI Platform UI Automation

Login Flow Coverage (25 scenarios)

- › Page load, URL & title validation
- › Email field: empty, invalid, whitespace, long
- › OTP screen: 6-input boxes, accept/reject digits
- › OTP validation: incomplete, wrong, correct
- › Full login happy path · Logout flow

Homepage Coverage (35+ scenarios)

- › Header navigation links & dropdown menus
- › AI Tools sub-menus (Image, Video, Text)
- › Hero section: headings, CTA, feature cards
- › Extension buttons & redirect validation
- › Tabs, value cards, gallery, footer columns

API Testing — Postman

Postman • REST • Swagger

Manual request validation • Schema checks • Backend integration testing

Coverage Areas

Auth Endpoints	Login, logout, token refresh, session expiry
CRUD Operations	GET / POST / PUT / DELETE on key resources
Input Validation	Empty, invalid, boundary, and special-char inputs
Error Responses	400, 401, 403, 404, 422, 500 — message & format
Response Schema	Field names, types, required fields, null handling
Business Logic	Data consistency between API responses and UI
Environment Config	Dev / Staging environments via Postman variables

What I Validate in Every Request

- › Status code matches expected value
- › Response body schema is correct
- › Required fields are present and typed
- › Error messages are clear and accurate
- › Response time is within acceptable range
- › Behaviour matches UI-level flow

Real Defect Types Found via API

- › Missing validation on required fields
- › Wrong HTTP status returned on errors
- › Data returned not matching UI display
- › Token not invalidated after logout
- › Inconsistent null vs empty string handling

Key Impact & Results

+30%

Search relevance & ranking consistency (AI Recruiting System)

-35%

Language-related defects reduced (Logistics Platform)

+25%

UI/UX consistency improved across multiple projects

90%

Regression coverage rate on critical flows

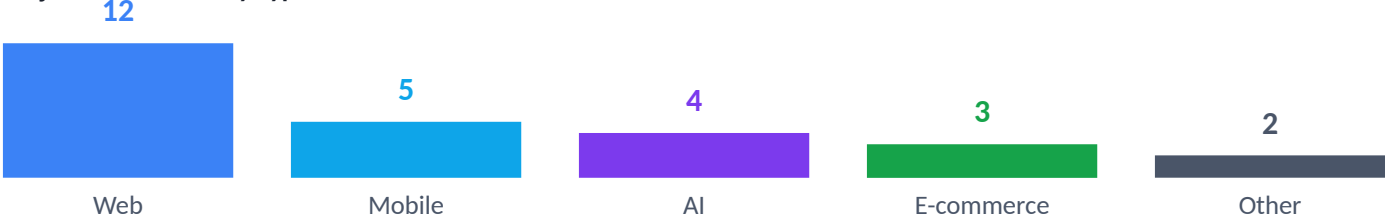

100%

Responsive layout stability across browsers & devices

+30%

AI response consistency & workflow reliability improved

Project Distribution by Type:

Version Control

Git · GitHub

WORK APPROACH

01

Understand requirements,
risk areas and user flows

02

Design test cases,
checklists and scenarios

03

Execute tests and log
defects with full context

04

Retest, document results
and maintain traceability

Quality-first approach · Risk-based testing · Clear documentation at every stage
